

BondCircle

CONFIDENTIAL INVESTOR DISCUSSION DRAFT

Investment and Launch Funding Proposal

A founder-controlled, milestone-funded path from a live production PWA to a fully operational web platform and iOS/Android launch.

RECOMMENDED RAISE	PLANNED RUNWAY	INVESTMENT TYPE
NGN 60m	12 months	Convertible

Prepared for the Founder of BondCircle
1 August 2026

This document is an investment-planning draft, not an offer of securities and not legal, tax, accounting or investment advice. Final terms should be prepared by qualified Nigerian counsel and advisers.

INVESTMENT THESIS

Executive summary

The recommendation

Raise NGN 60 million for a 12-month runway through a founder-controlled, milestone-based convertible instrument. Use the capital to close the remaining production gates, deliver store-ready iOS and Android apps, complete compliance and independent QA, run a measured launch, and establish reliable operating data before pricing a larger equity round.

Why this is investable now

Evidence	What exists today	Why it matters
Product	Three complete product modes: Gift, Aso-Ebi and Support Circles.	The capital funds launch and scale, not an untested idea.
Technology	Live Next.js PWA on bondcircles.com with Firebase authentication, relational data, secure invitations, receipts, notifications and owner controls.	A working codebase and production architecture reduce build risk.
Quality	Milestones 1-16 are implemented; Milestones 17-18 code is published with automated build, test and security gates.	The remaining gap is operational acceptance and real-user verification.
Revenue	Creators pay per circle; invitees and contributors do not pay platform access fees.	A simple, trust-aligned monetisation model is already defined.
Boundary	BondCircle coordinates contributions but does not hold, pool or escrow member funds in Version 1.	This narrows financial-custody exposure while the business validates demand.

What the investor is funding

The investment should not purchase the project or transfer the intellectual property. It should buy a minority economic interest in the company through a convertible agreement, with funds released against objective delivery gates. The founder retains product control; investors receive information rights, agreed conversion economics and pro-rata participation rights.

THE PRODUCT

A coordination layer for meaningful group moments

BondCircle helps people create trusted circles around gifts, Aso-Ebi events and community or family support. It organizes membership, contribution expectations, payment evidence, communication and completion while members pay the organizer directly outside the platform.

GIFT CIRCLE	ASO-EBI CIRCLE	SUPPORT CIRCLE
Coordinate a shared gift for birthdays, anniversaries, graduations, baby showers, housewarmings and corporate moments.	Coordinate event attire, tier pricing, member payments and delivery status for weddings, burials and other events.	Coordinate voluntary help for medical, emergency, burial, charity, family and community needs.

Core user promise

Need	BondCircle response
Trust	Verified accounts, signed invitation tokens, role-based access and auditable activity.
Transparency	Visible members, targets, contribution status, receipts and progress.
Control	Creators can invite, appoint co-admins, review proof, announce, complete and archive.
Participation	Contributors can join, upload proof, comment, view updates and receive reminders.
Privacy	Membership-scoped access, private uploads, redacted sensitive support data and retention controls.

Important positioning

BondCircle is not a wallet or payment processor in Version 1. It does not custody contribution money. This distinction must remain clear in investor materials, product copy, legal documents and customer support.

DELIVERY POSITION

What has been built - and what remains

16	3	115	1
milestones implemented and verified	production circle modes	local automated tests reported passing	live production domain

Area	Current position	Funding implication
Web product	Responsive production PWA is live over HTTPS.	Use it for pilot learning while native delivery proceeds.
Authentication	Email, phone and Google paths are implemented with secure sessions and account controls.	Fund live-device and provider verification at scale.
Circle engine	Lifecycle, roles, tier limits, all three circle types, invitations and contribution evidence are implemented.	Fund real-user validation and defect closure.
Operations	Monitoring, analytics, owner administration, abuse controls and retention workflows are present.	Fund incident readiness, support operations and independent review.
Cloud dependency	Firebase Storage and managed database backup depend on an active Google Cloud billing account.	Immediate closeout item; budgeted as a controlled pay-as-you-go service.
Legal acceptance	Core legal UI exists, but final company, privacy and complaint details require owner and counsel sign-off.	Fund corporate, privacy, IP and store-policy advice.
Native apps	Current product is a PWA; there is no confirmed native iOS/Android codebase in the repository.	Fund an architecture spike, native shells/apps, device QA and store submissions.

Evidence boundary

This proposal does not claim revenue, active users, retention, market share or app-store approval because no verified evidence for those metrics was supplied. Those are the next diligence and launch measurements, not assumptions to manufacture.

WHY CAPITAL NOW

The shortest responsible route to launch

The product can continue as a web PWA, but a credible consumer launch requires more than keeping the website online. Capital should close the operational risks first, then fund native delivery and measured growth.

01**Production closeout**

Activate billing, provision secure Storage, deploy reviewed rules, establish managed backup and rehearse restore/rollback.

02**Legal and corporate readiness**

Confirm legal entity and IP ownership, finalize Terms/Privacy, privacy governance, complaint process, contracts and investor documentation.

03**Native mobile delivery**

Select the lowest-risk architecture, build iOS and Android experiences, add platform capabilities, test on real devices and pass store review.

04**Independent release assurance**

Security assessment, accessibility/device QA, email deliverability, abuse testing, incident exercises and production smoke tests.

05**Launch and learning**

Pilot cohorts, customer support, analytics, lifecycle communications, creator education and pricing validation.

Funding principle

Do not spend heavily on user acquisition before production uploads, backup recovery, legal acceptance, real-device authentication and the three primary circle journeys are verified end to end.

FUNDING OPTIONS

Three practical capital scenarios

The correct amount depends on how quickly native apps and go-to-market capacity are required. The middle case is recommended because it avoids both underfunded delivery and premature scale spending.

Scenario	Raise	Runway	What it can reasonably fund	Assessment
Lean bridge	NGN 25m	6-8 months	Production closeout, legal minimum, PWA pilot, native discovery and a tightly scoped beta.	Possible, but high execution and re-fundraising risk.
Recommended	NGN 60m	12 months	Full closeout, compliance, iOS/Android delivery, independent QA, pilot launch, support and controlled growth.	Best balance of delivery certainty, founder control and evidence creation.
Growth-led	NGN 100m	15-18 months	Larger dedicated team, faster mobile build, wider launch and material acquisition budget.	Delay until retention and paid conversion are proven.

Recommended ask: NGN 60 million

This is a planning target, not a valuation. It assumes a small execution team, external legal/security specialists, controlled infrastructure, native store delivery and a 12-month evidence-building runway. Before signing, replace estimates with named vendor quotes, employment/contractor budgets and tax advice.

Suggested two-investor allocation

Use the same instrument and economic terms for both investors. An illustrative split is a lead investor at NGN 36m (60%) and a co-investor at NGN 24m (40%). The split may be equal; consistency of rights matters more than equal cheque size.

USE OF FUNDS

12-month deployment of NGN 60 million

Management planning budget. Amounts include cash cost and reasonable delivery allowance, but exclude undisclosed founder compensation, taxes arising from the investment, and any cost not supported by a signed budget.

Category	NGN m	Control / evidence required
Engineering and mobile	15.0	Milestone scope, acceptance tests, IP assignment and repository delivery.
Launch and market	10.0	Pilot plan, capped channel tests, measured acquisition and weekly funnel review.
Operations runway	8.0	Approved monthly operating budget and receipts.
Contingency / FX	7.0	Board/founder release approval; unused balance remains runway.
Legal / compliance	6.5	Counsel engagement, incorporation/IP records, privacy and investor documents.
Security / QA	5.0	Independent reports, remediation evidence and real-device sign-off.
Cloud / tooling	4.5	Spend alerts, least privilege, provider invoices and monthly cost report.
Design / support	4.0	User-tested flows, support playbook and launch content.
TOTAL	60.0	12-month planning envelope.

CAPITAL RELEASE

Tie funding to delivery, not calendar promises

Tranche	Amount	Release condition	Primary outputs
1 - Closeout	NGN 18m	Investment documents signed; funds and reporting controls established.	Billing/storage/backups, legal workstream, production smoke tests, mobile architecture decision.
2 - Build	NGN 20m	Production closeout gates evidenced; mobile plan and acceptance scope approved.	iOS/Android beta, deep links, authentication, uploads, notifications, store materials and device QA.
3 - Launch	NGN 22m	Beta acceptance, security remediation and launch readiness review passed.	Store submission, pilot cohorts, support operations, measured acquisition and 6-month post-launch runway.

Execution roadmap

IOS AND ANDROID

A staged mobile strategy

The existing PWA should remain the fastest path to real-user learning. Native apps should be funded as a deliberate product workstream, not assumed to be a simple website wrapper.

Step	Decision	Acceptance gate
1. Architecture spike	Compare a native shell using the existing web stack with a shared-backend native client. Evaluate store policy, offline behavior, deep links, uploads, notifications, accessibility and maintenance cost.	Written decision record with prototype evidence and whole-life cost.
2. Shared backend	Keep Firebase authentication, Data Connect, Storage and server-side authorization as the controlled source of truth.	No client-only permission enforcement; production API tests pass.
3. Platform experience	Implement app-quality navigation, install identity, push/deep links, camera/file access, safe-area behavior and resilient session recovery.	Real-device test matrix passes on supported iOS and Android versions.
4. Store compliance	Prepare privacy labels/data safety, account deletion, support links, screenshots, review credentials and payment-policy analysis.	App Store Connect and Play Console submissions accepted for review.
5. Release control	Use staged rollout, crash/error monitoring and rollback/disable controls.	Pilot metrics and critical-error thresholds approved before broad release.

External item	Current public price	Planning note
Apple Developer Program	USD 99 / membership year	Organization enrollment requires verified legal identity and may require a D-U-N-S Number.
Google Play Console	USD 25 one-time registration	New personal accounts have additional testing and device-verification requirements; organization setup is preferable where eligible.
Store transaction fees	Policy-dependent percentage	BondCircle's creator activation fee must be reviewed against current digital-goods and alternative-billing rules before native monetisation is enabled.

BUSINESS MODEL

Simple creator pricing, disciplined validation

Plan	Member capacity	Current fee per circle	Payer
Free	Up to 3	NGN 0	Creator
Starter	Up to 10	NGN 1,000	Creator
Standard	Up to 30	NGN 2,000	Creator
Premium	Up to 100	NGN 3,500	Creator

Illustrative paid-circle economics

The following is not a forecast. It demonstrates the scale required under the current pricing. Assumed paid-tier mix: 30% Starter, 45% Standard and 25% Premium, producing a blended fee of NGN 2,075 per paid circle, before taxes, payment processing and any app-store charges.

Paid circles / month	Illustrative monthly gross revenue	Interpretation
500	NGN 1.04m	Pilot revenue; not enough to fund a full operating team.
2,000	NGN 4.15m	Approaches a lean operating base before fees and taxes.
5,000	NGN 10.38m	Supports reinvestment if retention, support cost and fraud remain controlled.
10,000	NGN 20.75m	Requires dependable infrastructure, automation and customer support.

Commercial conclusion

The locked launch prices are useful for adoption testing but may be too low to support native-store charges, support and a durable team. Preserve them for the initial pilot, measure willingness to pay, then test annual creator plans, organization packages or paid operational add-ons without charging contributors for access.

INVESTMENT STRUCTURE

Protect founder control and align both investors

Because verified revenue and retention data are not yet available, fixing a large equity percentage today risks either over-diluting the founder or giving investors an unsupported valuation. A convertible instrument is the cleaner discussion starting point.

Term	Recommended discussion position
Instrument	A Nigerian-law compliant SAFE-style convertible agreement or convertible note selected and drafted by counsel.
Investment size	NGN 60m total, funded in three tranches; both investors use the same core economic terms.
Conversion	At the next qualified equity financing or another clearly defined conversion event.
Discount	Illustrative 15-20% conversion discount, subject to counsel, tax advice and negotiation.
Valuation cap	Do not invent one in this memo. Set it after a cap-table review, comparable transactions, IP diligence and early traction evidence.
Founder control	Founder retains operational control and IP is owned by the company. No transfer or security interest over the product code without explicit counsel-reviewed agreement.
Investor rights	Quarterly information rights, pro-rata participation right and narrow consent rights for extraordinary actions only.
Board	Observer or advisory access may be offered. Avoid two investor board seats at this stage unless the founder deliberately accepts that governance trade-off.
Most-favoured terms	If appropriate, keep both investors economically aligned through equal-ranking terms rather than bespoke side deals.

Alternative if investors insist on equity now

Commission an independent valuation and cap-table model first. Negotiate a minority round with a clear employee option pool, reserved matters and anti-dilution language. Do not agree an equity percentage solely by dividing the cheque by an arbitrary valuation.

INVESTOR REPORTING

A compact operating dashboard

A monthly internal review and quarterly investor report should show evidence, not activity theatre. Metrics should be privacy-sanitized and segmented by circle type and platform.

Area	Metric	Why it matters
Acquisition	Verified registrations by source and cost	Shows whether growth spending creates real accounts.
Activation	First circle created; invitation sent; invitation accepted	Tests whether creators and invitees reach value.
Engagement	Active creators, active circles, contribution proof success	Shows whether the coordination workflow is used.
Retention	Creator repeat-circle rate; 30/90-day active return	The strongest signal of recurring product value.
Revenue	Paid circles, tier mix, gross receipts, refunds and paid conversion	Validates pricing and cash generation.
Reliability	Upload failure, OTP delivery, error rate, notification delivery, uptime	Protects trust and identifies provider risk.
Safety	Abuse reports, suspicious invites, account deletion/export response	Measures responsible operation.
Support	Time to first response and time to resolution	Shows whether operational quality scales.
Cash	Monthly burn, runway, committed liabilities and cloud spend	Prevents surprise fundraising and cost overruns.

Decision gates

Gate	Proceed only when
Broad paid acquisition	Core production flows and support operations are stable; activation and retention are measured.
Larger equity round	At least two quarters of coherent user, retention and revenue evidence exist.
New product modes	The three launch modes are stable and users consistently complete their circle journeys.
Payment custody	Only after a separate regulatory, banking, compliance and risk program - not within Version 1.

RISK REGISTER

Material risks and the funded response

Risk	Current exposure	Funded mitigation
Cloud readiness	Storage and managed backup depend on active Google Cloud billing.	Activate Blaze with budgets/alerts, provision reviewed resources, rehearse backup/restore and maintain rollback evidence.
Legal/privacy	Final legal identity, privacy contacts and policies require counsel and owner approval.	Complete corporate/IP records, privacy mapping, NDPC advice, contracts, complaints and incident procedures.
App-store review	A thin wrapper or unclear payment model may be rejected or create fee exposure.	Run architecture and policy review before build; deliver meaningful platform-native behavior and accurate disclosures.
Trust/fraud	Fake proof, abusive invites or organizer disputes can damage adoption.	Keep role-based access, audit trails, abuse tools, clear non-custody messaging and support escalation.
Adoption	There is no verified traction evidence in this memo.	Pilot narrowly, interview creators/invitees, track activation/retention and stop channels that do not convert.
Pricing	Current per-circle fees may not sustain operations at modest volume.	Measure tier mix and willingness to pay; model taxes, provider/store charges and support cost before scaling.
Key-person	Founder knowledge may be concentrated.	Document operations, use controlled access, establish incident deputies and ensure company ownership of IP/accounts.
FX/vendor	Core vendors bill in foreign currency and may change policy/pricing.	Maintain contingency, spend caps, export/rollback plans and quarterly vendor review.

Regulatory note

BondCircle processes personal data and should obtain Nigeria Data Protection Act advice appropriate to its scale and role. The NDPC identifies rights including access, rectification, portability, objection and erasure, and recognizes licensed Data Protection Compliance Organisations. The company should determine its actual registration, DPO, audit and filing obligations with qualified counsel or a licensed DPCO; this memo does not make that legal determination.

INVESTOR PROCESS

A disciplined path from conversation to close

Step	Action	Deliverable
1	Incorporation and ownership check	Legal entity, cap table, founder/shareholder records, IP assignment and domain/provider-account ownership.
2	Investor fit meeting	Confirm cheque size, time horizon, strategic value, governance expectations and conflicts.
3	Data room	Product documents, live demo, repository evidence, release ledger, security review, budgets, contracts, policies and risk register.
4	Budget validation	Named 12-month budget with quotes, role plans, tax treatment, FX assumptions and monthly cash-flow model.
5	Term sheet	One aligned term sheet for both investors; tranche conditions and reporting defined.
6	Legal documents	Counsel-prepared investment instrument, board/shareholder approvals and updated statutory records.
7	Close and execute	Funds into company account; expenditure controls, reporting calendar and first 90-day delivery plan activated.

Suggested investor data-room index

Corporate	Product / technology	Commercial / finance
Certificate and statutory records Cap table IP and contractor assignments Founder identity and conflicts Domain and account ownership	PRD and locked launch scope 18-milestone plan and release ledger Architecture and security review Test/CI evidence Production runbook and incident plan	12-month cash-flow budget Pricing and unit-economics model Pilot plan and funnel metrics Provider/vendor costs Tax and accounting advice

Founder discussion position

BondCircle is seeking launch capital and strategic support, not a sale. The investor proposition is participation in future company value created by a working product, disciplined production completion, native distribution and measured adoption - with founder control and the product's long-term mission protected.

PLATFORM COST BASE

Current public provider pricing

These published prices are reference points, not the operating budget. Actual charges depend on traffic, storage, database size, functions, seats, exchange rates, taxes and provider policy. Accessed 1 August 2026.

Provider	Public price / requirement	BondCircle planning treatment
Firebase Storage	Blaze pay-as-you-go plan required; no-cost allowances may still apply.	Link active billing, set budgets/alerts and monitor Storage/Data Connect usage.
Vercel	Pro listed at USD 20/month with included usage credit; usage can be additional.	Use a commercial plan, hard spend limits and monthly usage review.
Resend	Free: 3,000 emails/month and 100/day. Pro: USD 20/month for 50,000 emails.	Start controlled; move to paid capacity before OTP/notification volume hits limits.
Apple	Developer Program USD 99 per membership year.	Enroll the legal organization after entity/identity readiness.
Google Play	USD 25 one-time developer registration fee.	Use organization setup where eligible and plan for verification/testing requirements.
